UNIVERSITI MALAYSIA SARAWAK

## **CHAPTER 4: IMPLEMENTATION AND TESTING**

### **4.1 Introduction**

This chapter will discuss the proposed online portfolio system's implementation and testing phases to ensure sure all the earlier-defined requirements from the previous chapters have been met. To make sure the system is completely functional and prepared for testing, both the front-end design and back-end functionality will be developed during the implementation phase. Using the prepared test cases with different scenarios, the system will be tested during the testing phase to make sure that the specifications are clear and that any errors are found for future improvement.

### **4.2 Development tools**

The main development tools that are used for the implementation of the proposed system are as follows: Visual Studio Code is used as Source Code Editor, XAMPP used as MySQL database and localhost server. Next, the programming language that are used for the development of the web system are HTML, CSS, JavaScript, and PHP.

### **4.3 System Components**

The main development tools that are used for the implementation of the proposed system are as follows: Visual Studio Code is used as Source Code Editor, XAMPP used as MySQL database and localhost server. Next, the programming languages that are used for the development of the web system are HTML, CSS, JavaScript, and PHP.

#### **4.3.1 Visual Studio Code**

Visual Studio Code is the main source code editor for this project. Visual Studio Code also commonly referred to as VS Code, which is developed by Microsoft for Windows, Linux macOS and web browsers. Visual Studio Code also includes support for syntax highlighting, debugging, code refactoring and embedding control with Git. Figure 4.1 shows that installed VS Code version with others version details. VS code also provides tutorial (walkthroughs) for the

ease of use of the user. VS code also includes multiple coding language which allows users to code easily with multiple coding language.

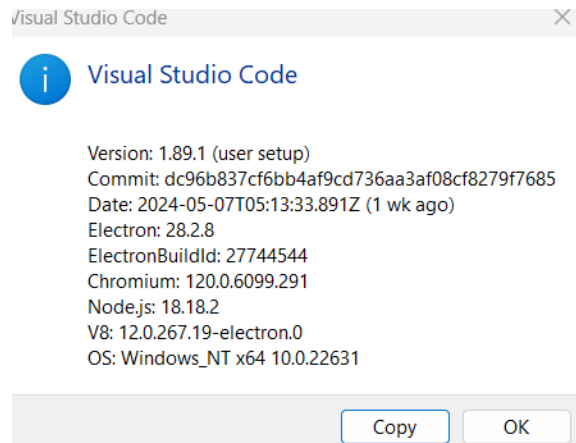

Figure 4.1: Visual Studio Code Detailed Version

### 4.3.2 XAMPP

XAMPP is used as the MySQL database for this project. XAMPP stands for Cross-Platform, Apache, MySQL, PHP, and Perl. XAMPP is a free platform that allows users to test their code locally on their own computer. This platform allows users to host a mini web server and create tables for database before hosting their own web. Figure 4.2 shows the control panel of XAMPP which allows users to start hosting the server and admin function which allows them to view and manipulate the database.

## 4.4 System Implementation

### 4.4.1 Sign-Up Page

The image shows a web form titled "Portfolify User Registration". The form contains several input fields, each with a label above it. Below each field, there is a red error message indicating that the field is required. The fields and their corresponding error messages are:

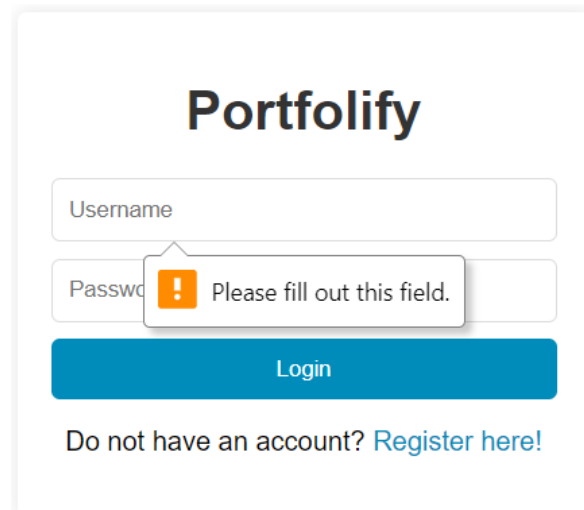

- First Name:** A text input field with the placeholder "First Name". Below it, the error message "First name is required." is displayed.
- Last Name:** A text input field with the placeholder "Last Name". Below it, the error message "Last name is required." is displayed.
- Gender:** A dropdown menu with the placeholder "— Select An Option —". Below it, the error message "Gender is required." is displayed.
- Email:** A text input field with the placeholder "Example@mail.com". Below it, the error message "Email is required." is displayed.
- Mobile (+60):** A text input field with the placeholder "(+60) 12-345 6789". Below it, the error message "Mobile is required." is displayed.
- Your Position:** A dropdown menu with the placeholder "— Select An Option —". Below it, the error message "Position is required." is displayed.
- Password:** A text input field with the placeholder "Password".
- Confirm Password:** A text input field with the placeholder "Confirm password".

At the bottom of the form, there is a checkbox that is checked, followed by the text "I accept the above Terms and Conditions". Below this, there is a green button labeled "Register Now".

*Figure 4.3: Sign-up Page*

Figure 4.3 shows the sign-up page of Portfolify. User or recruiter is required to fill-in the following required information to register an account. If the user or recruiter missed out the required information, the system will prompt an error and indicate the information is required as show in the figure above.

#### 4.4.2 Login Page

Portfolify

Username

Password

! Please fill out this field.

Do not have an account? [Register here!](#)

*Figure 4.4: Login Page*

Figure 4.4 shows the login page with username and password as user input. The user needs to enter the correct username and password and click on the “Login” button to log in to the system. If the username or password is not entered, the system will prompt a message “Please fill out this field” message.
